PAVING THE WAY FOR GREEN ROADS

SHELTON, CONN. –

As recently announced, one of President Obama's initiatives for 2009 will be to repair our highways, bridges and roads. Fortunately, we have an opportunity to re-build the infrastructure the right way with sustainable materials and socially sensitive designs as well as establish better uses of recycled and virgin aggregate.

Over 85% of our roads in the US are paved with asphalt, which is the most frequently reclaimed material in the nation. At a time when the price of asphalt has nearly tripled over the last year, more and more companies and municipalities are looking for ways to use recycled material to replace and improve their existing road surfaces.

Greg Harla, Director of Sales & Marketing and partner in the exclusive US Distributorship of Bagela Asphalt Recyclers said "My best hope is to get the paving industry to recognize that they can save tremendous amounts of energy, time and money by using materials such as recycled asphalt."

Bagela is a German company that developed this recycler to reduce waste asphalt sent to landfills each year. A unique indirect heating process recycles the asphalt, making it a viable alternative to traditional plant mix. It can cut paving costs in half or more. As world petroleum reserves shrink, Harla considers it the future of paving.

"We expect our municipalities to be leading the way with recycled asphalt in 2009 since they have already begun to realize the cost savings and convenience benefits." Cities, like Milford, CT have been using the portable Bagela Asphalt Recycler for years to fix potholes permanently, even in the middle of winter. "Our Bagela Asphalt Recycler paid for itself in just 3 years." Said Bruce Kolwicz, Public Works Director for the city of Milford, Connecticut.

Bagela USA sells and services the entire line Bagela Asphalt Recyclers and accessories. The recyclers are available through Bagela USA directly or a select group of dealers throughout the United States. The recyclers will be on display at the upcoming World of Asphalt trade show in Orlando, Florida, March 9-12, 2009.
